

What is SFX?

SFX is a computer application which links our electronic library resources together.

- It allows you to link directly from your results in a database to the full-text (where we have a subscription).
- It automatically updates links to electronic journals if the journal web address changes.
- It provides links to the LSHTM Library catalogue and to other local and national library catalogues, allowing you to easily find items not electronically available at LSHTM.
- It integrates with EndNote to allow you to import references to your EndNote library and create SFX links for your EndNote references.

How does SFX work?

Whenever you search a database, such as Web of Science, you may see the SFX button  appearing next to each reference.

Click here to search library catalogues

Click here to download to EndNote

When you click the Go button, another window or tab will open, taking you to the electronic journal or the library catalogue.

Using SFX with EndNote

You can create links to the SFX menu for each reference in your EndNote library. You first need to set this up (you need to do this on each EndNote library), but you need only set it up once:

- Open your EndNote file and choose Edit > Preferences.
- Choose the Find Full Text option
- Ensure the Open URL option is ticked and enter the following in the OpenURL box: <http://lshtmsfx.hosted.exlibrisgroup.com/lshtm>
- Click Apply
- Click OK.

To view the SFX screen for a reference, highlight the reference in your EndNote Library and right-click. Choose URL > Open URL link to display the SFX screen.
