

# **MODULE SPECIFICATION**

Academic Year (student	2020-21			
cohort covered by				
specification)				
Module Code	CTM209			
Module Title	Cluster Randomised Trials			
Module Organiser(s)	Natasha Larke			
Contact Email	CTsupport@lshtm.ac.uk			
Faculty	Epidemiology and Population Health London School of Hygiene & Tropical Medicine			
	http://www.lshtm.ac.uk/eph/			
FHEQ Level	Level 7			
Credit Value	CATS 15 ECTS 7.5			
HECoS Code	100962 : 100473			
Mode of Delivery	Distance Learning			
Mode of Study	Directed self-study, through online materials via the Virtual			
	Learning Environment			
Language of Study	English			
Pre-Requisites	All of the Clinical Trial (CT) elective modules assume			
	familiarity with the material and terminology introduced in			
	the core CT modules. Students who do not have a			
	background in clinical trials may need to spend some time			
	familiarising themselves with terminology before they can			
	successfully complete any of the CT elective modules.			
	Except with the special permission of the Programme			
	Director, a student must study CTM208 Further statistical			
	methods in clinical trials or EPM304 Advanced statistical			
	methods in epidemiology before studying CTM209. (Students			
	must not be registered for, and must not study, both CTM208			
	and EPM304 because the content of both modules overlaps.)			
	Prior reading is not required before registering on this			
	module. Students will be provided with core texts at the			
	beginning of the module.			
Accreditation by	Not currently accredited by any other body			
Professional Statutory				
and Regulatory Body				
	۱			

<b>Programme(s)</b> This module is linked to the following programme(s)	Status
PGDip/MSc Clinical Trials (Distance Learning - University of London Worldwide)	Elective
PGDip/MSc Epidemiology (Distance Learning - University of London Worldwide)	Elective

# **Module Aim and Intended Learning Outcomes**

Overall aim of the module		
The overall module aim is to:		
<ul> <li>equip students with the key knowledge, understanding and skills needed in the</li> </ul>		
design, ethical conduct, analysis, and reporting of cluster randomised trials.		

#### **Module Intended Learning Outcomes**

- Upon successful completion of the module a student will be able to:
- 1. Demonstrate an understanding of the key features of cluster randomised trials and when this type of trial may be appropriate
- 2. Critically evaluate design strategies for cluster randomised trials, including sample size requirements
- 3. Demonstrate skills in analysing data, and interpreting the results, from cluster randomised trials
- 4. Understand and address ethical issues specific to cluster randomised trials
- 5. Demonstrate skills in reporting the methods and results of cluster randomised trials.

# **Indicative Syllabus**

#### **Session Content**

The module is expected to include sessions addressing the following topics:

- Introduction and key concepts in cluster randomised trials
- Rationale for cluster-randomisation and choice of clusters
- Matching, restricted randomisation and alternative designs
- Cluster randomised trials: sample size
- Analytical principles and cluster-level analysis of CRTs
- Analysis of individual level data
- Analysis of pair-matched and stratified CRTs
- Ethical issues, Data Monitoring and Interim Analysis of CRTs
- Reporting and interpretation of results from cluster randomised trials
- Summary.

### **Teaching and Learning**

#### **Notional Learning Hours**

Type of Learning Time	Number of Hours	Expressed as Percentage (%)
Directed self-study	60	40
Self-directed learning	30	20
Assessment, review and revision	60	40
Total	150	100

#### **Teaching and Learning Strategy**

Learning is self-directed against a detailed set of learning outcomes using the materials provided.

To support their self-directed learning, students are strongly encouraged to:

- post questions for tutors or fellow students and participate in the module-specific discussion board forums available on Moodle.
- submit a Tutor Marked Formative Assignment (TMFA), for which personalised written feedback is available. Students are provided with written feedback on submitted TMFAs.
- work through the Self Assessed Formative Assignment (SAFA), for which self-• assessment tools are provided. This is not compulsory and does not contribute to the overall module grade.
- learn from written feedback from tutors on submitted AAs. •
- join real-time tutorials via Collaborate, available on Moodle, to obtain additional tutor • support: at least two tutorials are available, one focusing on assignments, and one for exam preparation.
- make use of LSHTM online library resources. •
- make use of Examiners' Reports which include previous assessed assignment questions and specimen answers.

## Assessment

#### Assessment Strategy

The assessment strategy for CTM209 is designed to support progressive student learning through two optional formative assessments, one self-assessed (SAFA) and the other tutormarked with feedback (TMFA) and two summative written assessed assignments (AAs). The FAs have the same word-length and format as the AA, to build skills, and encourage students to engage with the study materials. They encourage M-level thinking through questions which challenge students to consult study materials and to analyse and problemsolve. They support attainment of ILOs by collectively testing across the range of learning outcomes. The AAs are designed to test whether students are going beyond reiteration of the materials, and using M-level skills of criticality, and wider reflection. The word limits give sufficient text allowance to demonstrate these skills within a succinct and focused writing style. For all CTM209 assessments the application of key learning to scenario-based questions to develop practical skills directly applicable in real cluster randomised trials. On this module two past AA papers, (with specimen answers where appropriate), are also available for practice and self-assessment.

#### **Summative Assessment**

Assessment Type	Assessment Length (i.e. Word Count, Length of presentation in minutes)	Weighting (%)	Intended Module Learning Outcomes Tested
Assessed Assignment	Assessed Assignment 1 (AA1) has a maximum word length of 5000 words	50	1, 2 and 4
Assessed Assignment	Assessed Assignment 2 (AA2) has a maximum word length of 5000 words	50	1, 3, and 5

## **Resitting assessment**

Resits will accord with the LSHTM's Resits Policy

### Resources

### Essential resources

The following materials are provided to students after registration for this module once a year in October:

- Computer Assisted Learning (CAL) materials provided electronically through the online learning site Moodle, for self-directed study
- Stata datasets.
- E-books as below
- Online reading

#### E-books

• Hayes RJ, Moulton LH. *Cluster Randomised Trials*. Chapman & Hall/CRC; 2017

### Examples of online reading

- Campbell MKP. Consort 2010 statement: extension to cluster randomised trials, BMJ. 2012 Winter 12;345.
- Cheung YBJ. A simple approach to test for interaction between intervention and an individual-level variable in community randomized trials, Tropical Medicine & International Health. 2008;13(2):247–55–.
- Copas AJ, Lewis JJ, Thompson JA, Davey C, Baio G, Hargreaves JR. Designing a stepped wedge trial: three main designs, carry-over effects and randomisation approaches. Trials. 2015 Aug 17;16(1):1.
- Hayes R, Bennett S. Simple sample size calculation for cluster-randomized trials. International Journal of Epidemiology. 1999;28(2):319–26.
- Bennett S, Parpia T, Hayes R, Cousens S. Methods for the analysis of incidence rates in cluster randomized trials. Int J Epidemiology. 2002; 3 1: 839-846.
- Weijer CG. The Ottawa Statement on the Ethical Design and Conduct of Cluster Randomized Trials, PLoS Med [Internet]. Vol. 9. 2012

In addition to the materials above, students are given access to the LSHTM Virtual Learning Environment, Moodle (for online discussions forums etc.) and the LSHTM online library resources.

# **Teaching for Disabilities and Learning Differences**

The module-specific site on Moodle provides students with access to the module learning materials and online reading list (containing both essential and recommended readings), and additional resources including supplementary exercises and optional lecture recordings (where appropriate). All materials posted up on Moodle areas, including computer-based sessions, have been made accessible where possible. The LSHTM Moodle has been made accessible to the widest possible audience, using a VLE that allows for up to 300% zoom, permits navigation via keyboard and use of speech recognition software, and that allows listening through a screen reader. For students with special needs, reasonable adjustments and support can be arranged – details and how to request support can be found on the University of London Worldwide website at

https://london.ac.uk/applications/how-it-works/inclusive-practice-access-arrangements
