# Theories models and frameworks

Implementation science workshop  
Hawassa University, August 21-25, 2017

E-mail: [anna.bergstrom@kbh.uu.se](mailto:anna.bergstrom@kbh.uu.se)

# Today

- THE RATIONAL FOR USING THEORIES/FRAMEWORKS/MODELS
- A FEW EXAMPLES

# THE RATIONAL FOR USING THEORIES, FRAMEWORKS AND MODELS

# Using or not using theory

- An **expensive versions of trial and error**, providing little or no knowledge about which factors successfully influenced implementation efforts.

*Eccles et al., 2005*

- Transferring theory to the design of studies is not straightforward and there are many theories and **it is not clear which ones should be given primacy**.

*Bhattacharyya et al., 2006*

Whether one uses theory or not, one needs to identify

- **how** an innovation and the implementation strategy produces certain outcomes,
- **explore** by which processes change is brought about, and
- **define** which contextual factors that are critical for success or failure

# Why we do this

- Helps practitioners **plan implementation** and **think ahead**
- Guides researchers to **decide which data to gather to describe and explain** implementation
- May include hypotheses or theory about **action steps needed** and **critical contextual influences**

# Theories, frameworks and models

A theory is “a coherent and non-contradictory set of statements, concepts or ideas that organizes, predicts and explains phenomena, events, behaviour, etc.”

*Bem S and Looren-de-Jong H, 1997*

Models are specific and attempts to objectify the concept they represent – has value even if not complete

*Frnkfort-Nachmias et al, 1996*

A framework provides a frame of reference, assists in organizing thinking and guides the user on what to focus on.

*Rycroft-Malone and Bucknall, 2010*

# Types of theories, models and frameworks in Imp Sci

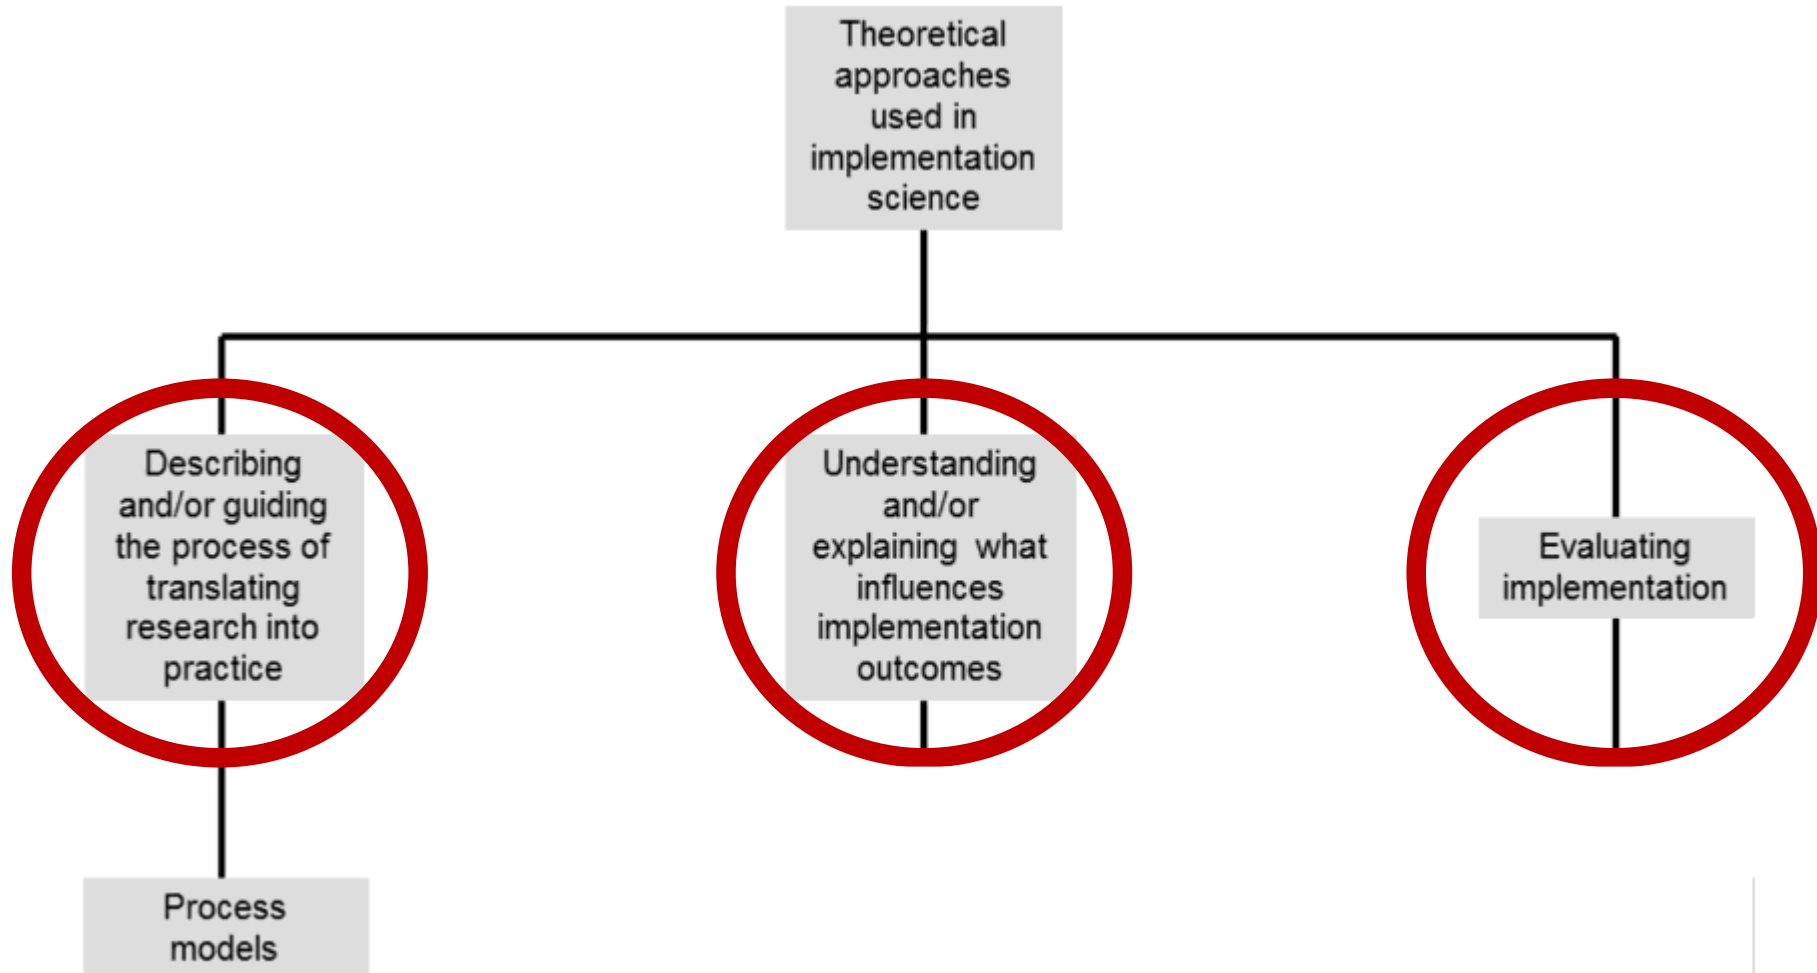

Table 1. Definitions of categories used to sort models

Category	Variable definition	Anchor definitions
<b>Construct flexibility</b>	Definition/flexibility of model constructs	1= <i>Broad</i> : loosely outlined and defined constructs; allows researchers greater flexibility to apply the model to a wide array of D&I activities and contexts 5= <i>Operational</i> : detailed, step-by-step actions for completion of D&I research processes
<b>Dissemination and/or implementation (D/I)</b>	Focus on dissemination and/or implementation activities	<i>D-only</i> : Focus on active approach of spreading evidence-based interventions to the target audience via determined channels using planned strategies <i>D=I</i> : Equal focus on dissemination and implementation <i>I-only</i> : Focus on process of putting to use or integrating evidence-based interventions within a setting
<b>Socioecologic framework</b>	Level of the framework at which the model operates	<i>Individual</i> : Personal characteristics <i>Organization</i> : Hospitals, service organizations, factory <i>Community</i> : Local government, neighborhood <i>System</i> : Hospital system, government

Table 2. Categorization of D&I models for use in research studies

Model	Dissemination and/or implementation	Construct flexibility: broad to operational	Socioecologic Level					References
			System	Community	Organization	Individual	Policy	
Diffusion of Innovation	D-only	1		x	x	x		21
RAND Model of Persuasive Communication and Diffusion of Medical Innovation	D-only	1		x	x	x		22
Effective Dissemination Strategies	D-only	2		x	x	x		23
Model for Locally Based Research Transfer Development	D-only	2		x	x			24
Streams of Policy Process	D-only	2	x	x	x		x	25, 26

# Types of theories, models and frameworks in Imp Sci cont.

A FEW EXAMPLES

# Some examples

- Theory of diffusion - Classic (determinant)
- Theory of planned behavior - Classic (determinant)
- Promoting Action on Research Implementation in Health Services framework – Determinant
- Integrated-Promoting Action on Research Implementation in Health Services framework – Determinant (but some process)

# THE GODFATHER

a classic theory/determinant –  
more towards passive spread

# Mr. Rogers

- This theory seeks to explain how innovations are taken up in a population.
- An **innovation** is an idea, behavior, or object that is perceived as new by its audience.
- **Diffusion** is the process in which the *innovation* is *communicated* through certain channels over *time* among members of a *social system*.

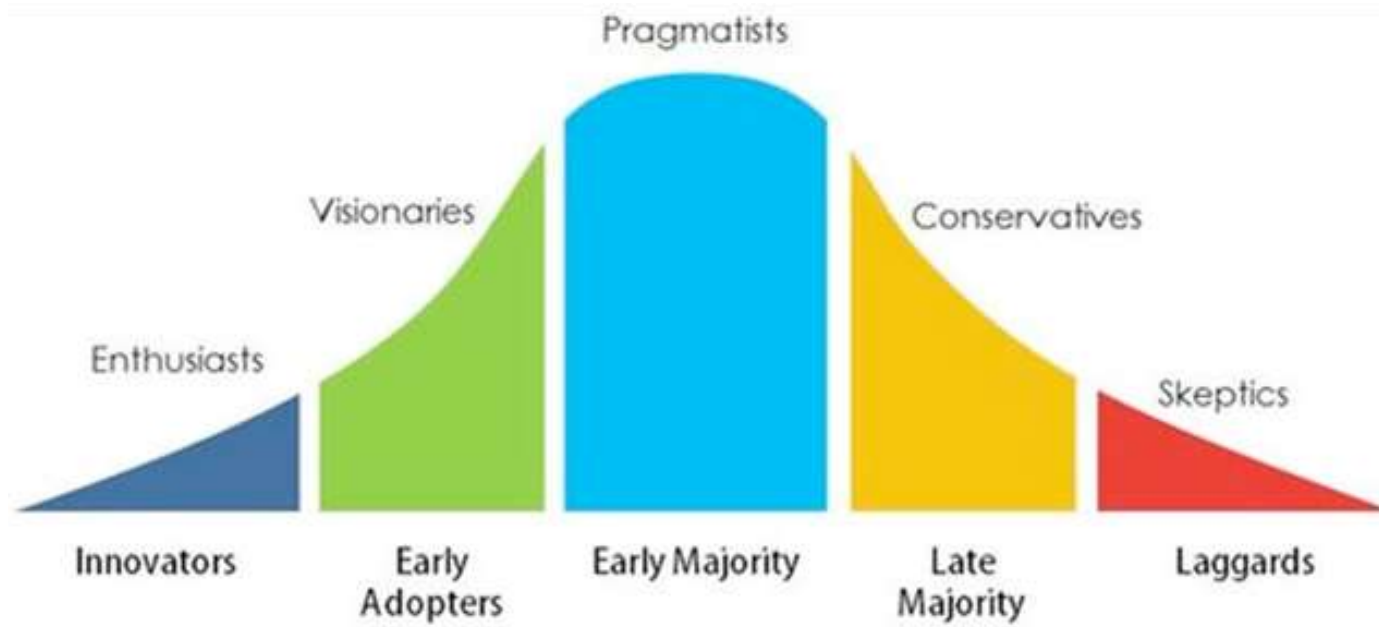

# What qualities make an innovation spread successfully?

1. Relative advantage
2. Compatibility with existing values and practices
3. Simplicity and ease of use
4. Trialability
5. Observable results

(1-5) determine 49-87% of variation

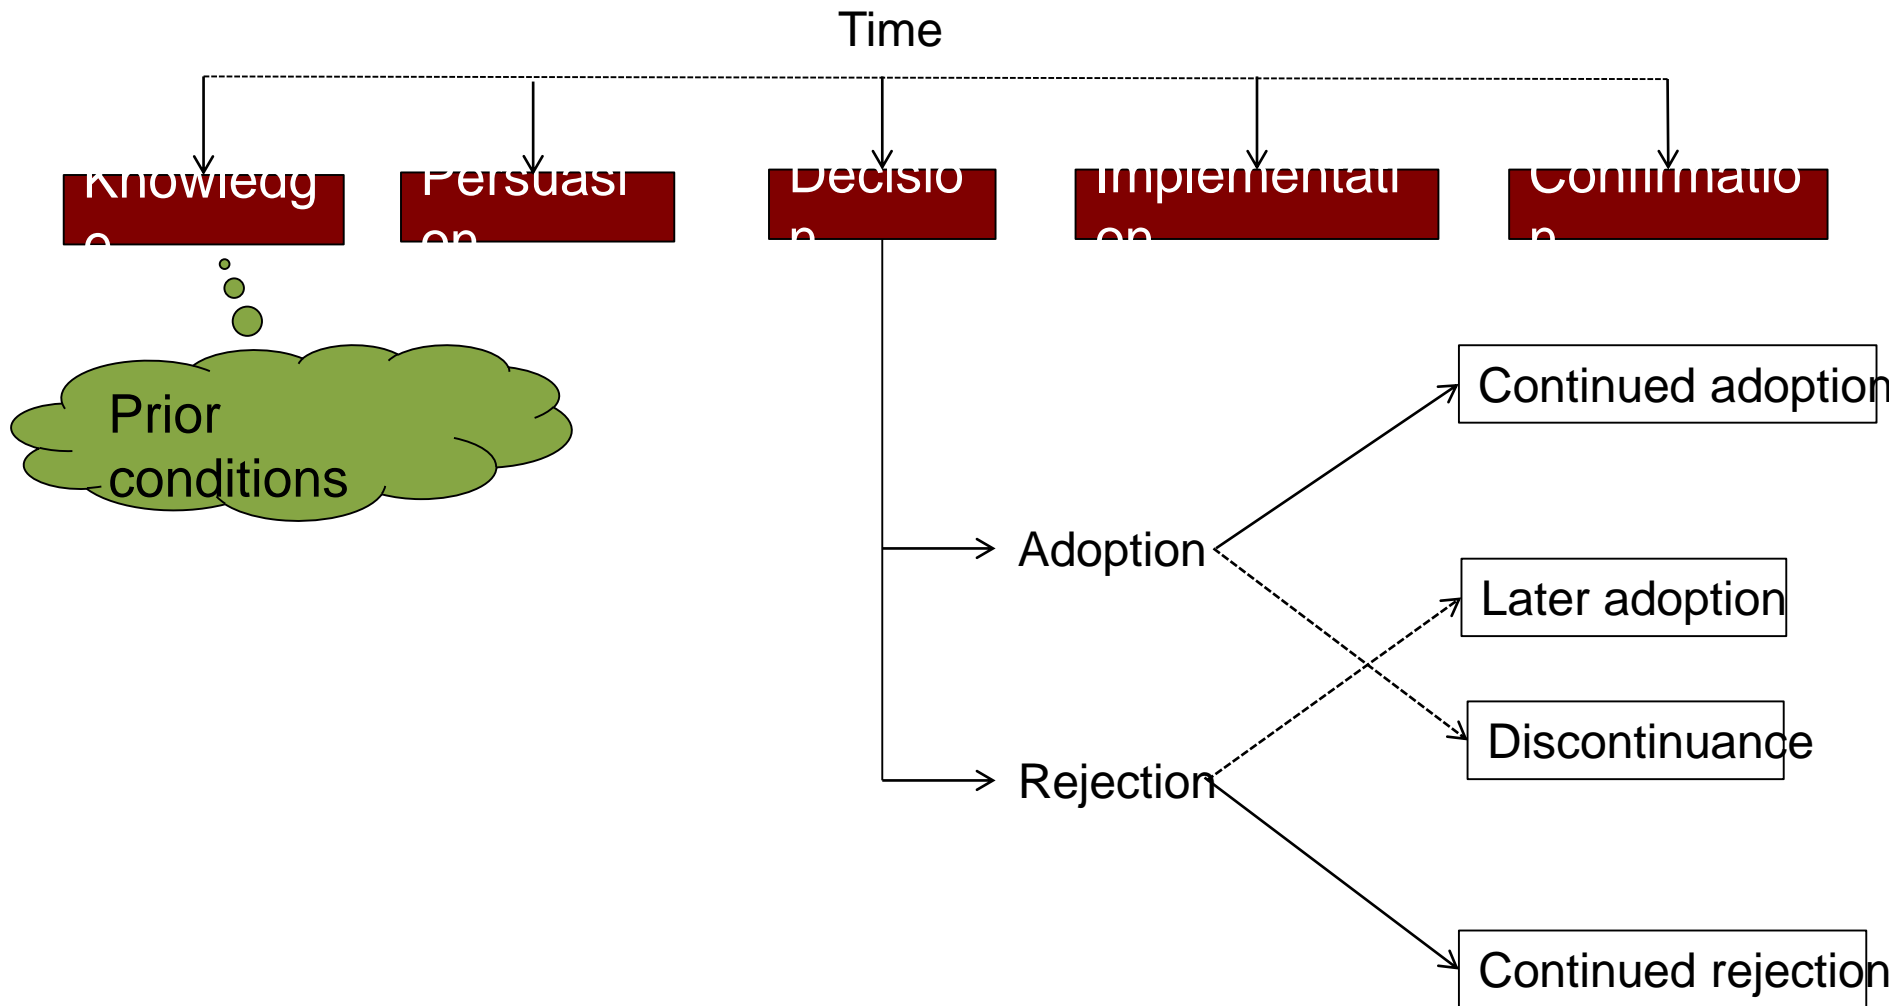

# Social system: Adopter categories

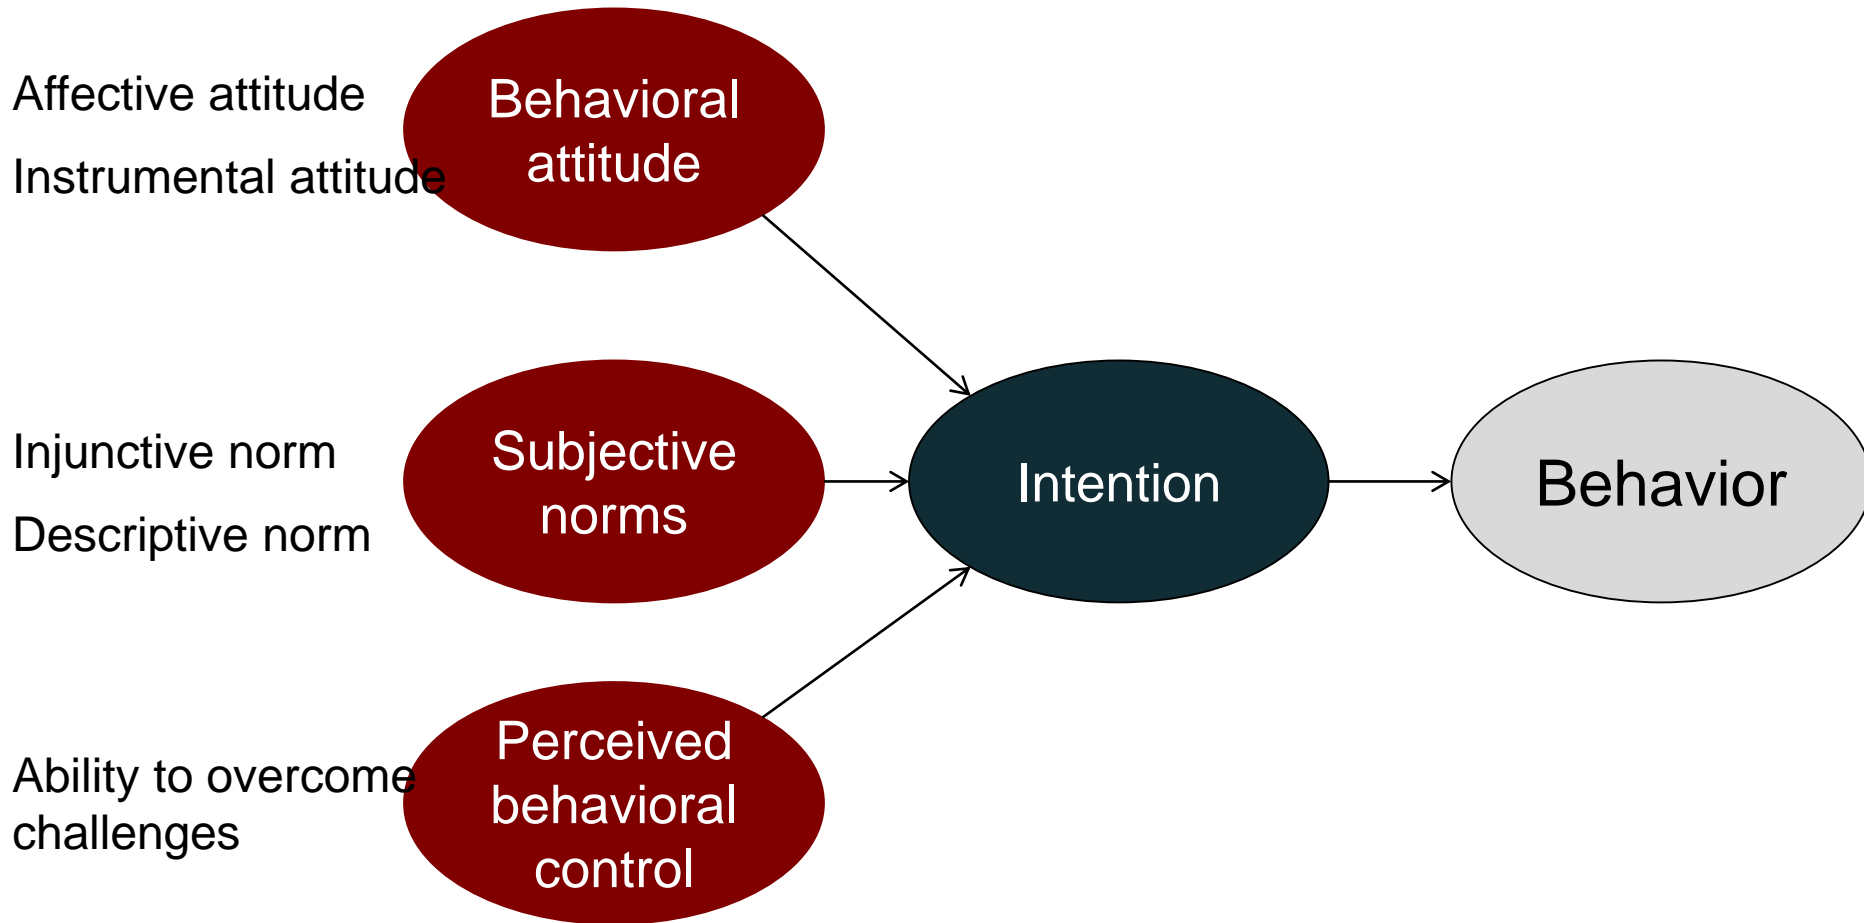

Time 

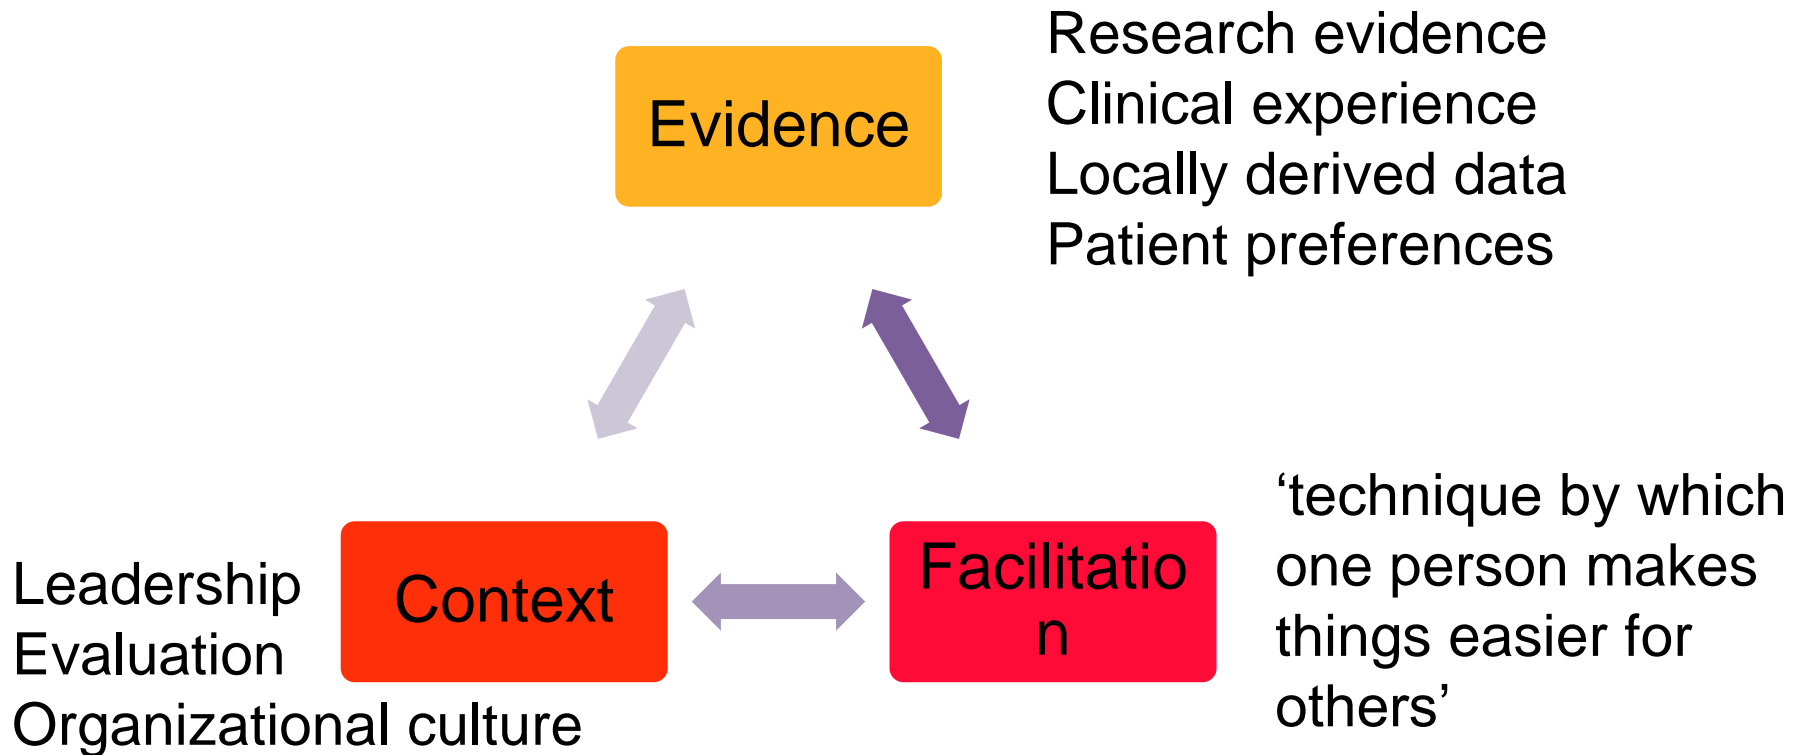

# The effect of time

# Theory planned behavior (TPB) – classic theory/determinant

# Promoting Action on Research Implementation in Health Services (PARIHS) determinant

# i-PARIHS

Look at the slides from yesterday presenting the characteristics of these constructs!

*Harvey and Kitson, 2015*

# Consolidated Framework for Implementation Research (CFIR)

The CFIR provides a menu of constructs can serve

- As a practical guide for systematically assessing potential barriers and facilitators (preparation for implementing an innovation,
- To provide theory-based constructs for developing context-specific logic models

Tension for change (inner setting):

*The degree to which stakeholders perceive the current situation as*

*intolerable or needing change* <sup>2009</sup>  
Damschroder et al. 2009  
<http://cfirguide.org/>

## Constructs

- Intervention characteristics

# CFIR cont.

The constructs can be used as implementation and evaluation criteria in three different ways, they may:

- Raise awareness for potential influential factors
- Facilitate the analysis of key processes and outcomes
- Help organise all findings of an implementation process to explain the outcomes

# CHOOSING YOUR THEORY, MODEL OR FRAMEWORK

# Choosing theory (framework or model)

**Determine the origin.** Who developed it? Where are they from (institution, discipline)? What prompted the originator to develop it? Is there evidence to support or refute the development of the theory?

**Examine the meaning.** What are the concepts and how they relate to each other. What are the concepts comprising the theory? How are the concepts defined? What is the relationship between concepts?

**Analyze the logical consistency.** Is there a logical structure of the concepts and statements? Are there any logical fallacies in the structure of the theory?

**Consider the degree of generalisability and parsimony of the theory.** Can generalizations can be made from the theory? How simple and briefly can the theory be stated and still be complete in its explanation of the phenomenon?

**Determine the testability.** Can the theory be supported with empirical data? A theory that cannot generate hypotheses that can be subjected to empirical testing through research is not testable.

**Determine the usefulness of the theory.** Usefulness of the theory is about how practical and helpful the theory is in providing a sense of understanding and/or predictable outcomes.

- Type of theory/model framework
  - Classic change theory/Process model/determinant framework
- What **evidence is there to support the assumptions** made?
- Can it guide you **planning**?
- Can it guide your **tailoring**?
- Can it guide you to **choosing your implementation strategy**?
- Can it guide the **evaluation**?

# Assignment (only a few examples!)

- Would the use of a framework assist you in informing and planning for evaluating a component of the OHEP intervention?
- Would the use of a framework be of value for your PhD for:
  - Generating in-depth understanding of determinants for change?
  - Better describe change processes?
  - Understand variations in outcomes?
  - Understand how characteristics of the innovation, recipients or context influenced the outcome?
- Could your study provide evidence or understanding of the validity of a framework in a low-income setting?
