Zebrafish Infection & Immunity UK

Zebrafish infection research has seen an exciting gain in momentum over recent years, enabling fundamental discovery and therapeutic advance. We therefore organise a one-day event each year to promote this emerging research avenue.

This Zebrafish Infection UK workshop held at LSHTM will highlight the potential of zebrafish to study host-pathogen interactions, and to dissect mechanisms of inflammation and immunity.

We have invited three outstanding speakers having made distinct contributions to the field, but the majority of the talks (15 mins) will be delivered by early-career researchers. We will also have a vibrant poster session and flash talks (2 mins) selected from the posters.

Invited speakers:

Francisco Roca - University of Cambridge, UK

Ana Cvejic - University of Cambridge, UK

Philippe Herbomel (keynote talk) - Institute Pasteur, France

Abstract submission:

Please submit your abstracts to zebrafishinfection@lshtm.ac.uk by **11 March 2019**.

The registration deadline is 1 April. Spaces are limited, and we expect to sell out. Register early to avoid disappointment!
