| **Faculty**                                                | Epidemiology and Population Health  
London School of Hygiene & Tropical Medicine  
[http://www.lshtm.ac.uk/eph/](http://www.lshtm.ac.uk/eph/) |
| **FHEQ Level**                                             | Level 7 |
| **Credit Value**                                           | CATS 15  
ECTS 7.5 |
| **HECoS Code**                                             | 100962 : 100473 |
| **Mode of Delivery**                                       | Distance Learning |
| **Mode of Study**                                          | Directed self-study, through online materials via the Virtual Learning Environment |
| **Language of Study**                                      | English |
| **Pre-Requisites**                                         | All of the Clinical Trial (CT) elective modules assume familiarity with the material and terminology introduced in the core CT modules, including a knowledge of basic statistics relevant to clinical trials. Students who do not have a background in clinical trials may need to spend some time familiarising themselves with terminology before they can successfully complete any of the CT elective modules. Prior reading is not required before registering on this module. Students will be provided with core texts at the beginning of the module. |
| **Accreditation by Professional Statutory and Regulatory Body** | Not currently accredited by any other body |
| **Module Cap (Maximum number of students)**                 | There is no cap on the number of students who can register for this distance learning module. The number of students actively studying this module varies, but typically approx. 65 students register for the module per year. |
| **Target Audience**                                        | Elective module for all the students on DL MSc Clinical Trials, PG Diploma Clinical Trials, MSc Epidemiology. Also open to |
any other student who meets pre-requisites for the module and who wishes to learn about trial designs.

**Module Description**

This module seeks to develop an understanding of the key features of a variety of trial designs and provide students with the opportunity to critique their appropriate use. The appropriate application of statistical principles to trial design and analysis will be discussed. Appropriate interpretation of trial results and analysis according to the trial design are also considered.

**Duration**

Distance learning module studies begin in early October. Students may start their studies at any time once they gain access to Moodle and therefore the study materials, and work through the material until the start of the June examinations (although assessment submission deadlines which are earlier than this must be observed).

**Last Revised (e.g. year changes approved)**

2020

---

**Programme(s)**

This module is linked to the following programme(s)

<table>
<thead>

</table>

**Module Intended Learning Outcomes**

**Overall aim of the module**

The overall module aim is to:

- familiarise students with a variety of trial designs and their fundamental characteristics, and provide students with the opportunity to demonstrate their appropriate use.

**Module Intended Learning Outcomes**

Upon successful completion of the module a student will be able to:

1. demonstrate knowledge of the key features of trial designs used to evaluate interventions
2. critically evaluate which trial design is most appropriate to the research question
3. demonstrate application of statistical principles to trial design and analysis
4. interpret the results from the analysis of trials according to the trial design.
Indicative Syllabus

Session Content
The module consists of 8 Computer-Assisted Learning (CAL) sessions. The titles of the sessions are as follows:

- Introduction
- Early Phase Trials
- Cluster RCTs
- Non-Inferiority/Equivalence Trials
- Cross-Over Trials
- Factorial Trials and Other Multi-Armed Trials
- Adaptive Design Trials
- Other Designs

Teaching and Learning Strategy
Learning is self-directed against a detailed set of learning outcomes using the materials provided.

To support their self-directed learning, students are strongly encouraged to:

- post questions for tutors or fellow students and participate in the module-specific discussion board forums available on Moodle.
- submit a Tutor Marked Formative Assignment (TMFA), for which personalised written feedback is available. Students are provided with written feedback on submitted TMFAs.
- work through the Self Assessed Formative Assignment (SAFA), for which self-assessment tools are provided. This is not compulsory and does not contribute to the overall module grade.
- work through the Self Assessed Mock Examination (SAME), for which self-assessment tools are provided. This is not compulsory and does not contribute to the overall module grade.
Teaching and Learning Strategy

- learn from written feedback from tutors on submitted AAs.
- join real-time tutorials via Collaborate, available on Moodle, to obtain additional tutor support: at least two tutorials are available, one focusing on assignments, and one for exam preparation.
- make use of LSHTM online library resources.
- make use of Examiners’ Reports which include previous assessed assignment and examination questions and specimen answers.

Assessment

Assessment Strategy

The assessment strategy for CTM202 is designed to support progressive student learning through optional formative assessments, which can be self-assessed (SAFA) or tutor-marked with feedback (TMFA), a summative written assessed assignment (AA) and a formal examination. The FAs and AAs have the same word-length and scenario-based short question format to build skills, and encourage students to engage with the study materials. They encourage M-level thinking through questions which challenge students to consult study materials and to reflect and problem-solve. They support attainment of ILOs by collectively testing across the range of learning outcomes. The AA is designed to test whether students are going beyond reiteration of the materials, and using M-level skills of criticality, and wider reflection. The word limit gives sufficient text allowance to demonstrate these skills within a succinct and focused writing style. The examination questions are also written to test core learning and M-level skills and should be answered with the same criticality as should be demonstrated in the AAs, but may be answered without recourse to the study materials. For all CTM202 assessments the application of key learning to scenario-based questions encourages students to develop the skill of using core learning to respond to real-life problems encountered in the design, conduct, analysis and interpretation of different clinical trial designs. On this module two past AA papers, and three past examination papers, all with specimen answers, are also available for practice and self-assessment.

Module Specification 2020-21 – CTM202
Resitting assessment

Resits will accord with the LSHTM's Resits Policy

Resources

**Essential resources**
The following materials are provided to students after registration for this module once a year in October:

- Computer Assisted Learning (CAL) materials provided electronically through the online learning site Moodle, for self-directed study
- Text book as below
- E-book as below
- Online reading as below

**E-books**

**Text book**
Essential resources

Examples of online reading

- Sedgwick P. Randomised controlled trials with full factorial designs *BMJ* 2012; 345:e5114

In addition to the materials above, students are given access to the LSHTM Virtual Learning Environment, Moodle (for web-based discussions forums etc.) and the LSHTM online library resources.

Teaching for Disabilities and Learning Differences

The module-specific site on Moodle provides students with access to the module learning materials and online reading list (containing both essential and recommended readings), and additional resources including supplementary exercises and optional lecture recordings (where appropriate). All materials posted up on Moodle areas, including computer-based sessions, have been made accessible where possible. The LSHTM Moodle has been made accessible to the widest possible audience, using a VLE that allows for up to 300% zoom, permits navigation via keyboard and use of speech recognition software, and that allows listening through a screen reader. For students with special needs, reasonable adjustments and support can be arranged – details and how to request support can be found on the University of London Worldwide website at https://london.ac.uk/applications/how-it-works/inclusive-practice-access-arrangements
