# Module Specification

## Academic Year (student cohort covered by specification)
2020-21

## Module Code
PHM305

## Module Title
Project report option

## Module Organiser(s)
Sarah Smith and Anna Foss

## Contact email
The LSHTM distance learning programmes and modules are run in collaboration with the University of London. Enquiries may be made via their [Student Advice Centre](https://www.lshtm.ac.uk/research/faculties/php).

(Enquiries from face-to-face i.e. London-based LSHTM MSc or research students regarding study of DL modules should be emailed to: [distance@lshtm.ac.uk](mailto:distance@lshtm.ac.uk))

## Faculty
Public Health & Policy: London School of Hygiene & Tropical Medicine
[https://www.lshtm.ac.uk/research/faculties/php](https://www.lshtm.ac.uk/research/faculties/php)

## FHEQ Level
Level 7

## Credit Value
- **CATS:** 45
- **ECTS:** 22.5

## HECoS Code
100473 : 100962

## Mode of Delivery
Distance Learning

## Mode of Study
Self-study, through the online Virtual Learning Environment

## Language of Study
English

## Pre-Requisites
Students registered for the MSc Public Health by distance learning programme should have completed all the core modules and also the Foundation Information Skills submodule offered via the Library. Feedback from past project students has mentioned that taking more than 2-3 electives on top of the project can be difficult. This module should only be taken by students in their final year of study.

Students who want to study this module must have regular access to the internet as the materials for this module are provided online and tutorial support is provided through web-based discussions and email.

Those wishing to study this module must register on the LSHTM Virtual Learning Environment (Moodle). The Module
Organisers and supervisors use Moodle as their primary means of communication with students and use it to make available a range of materials for studying the module. Students are also encouraged to use the discussion forums on Moodle for peer support to each other.

Students who are planning complex statistical analysis should have prior research experience in conducting statistical analysis and/or have completed EPM202 Statistical Methods in Epidemiology. EPM202 students get access to EPM103 materials which could be useful to those who also undertake the Project report option module. However, students will need to download EPM103 CAL sessions when registered on EPM202 as these are not available once EPM202 is completed. Please be aware that the LSHTM staff mostly use Stata for statistical analyses and so are generally unable to help in providing guidance on conducting analyses using other statistical packages or interpreting their output.

<td>None</td>
</tr>
<tr>
<td>Target Audience</td>
<td>This module is available only to those registered for the MSc Public Health by distance learning.</td>
</tr>
<tr>
<td>Module Description</td>
<td>This module provides students with an opportunity to develop independent research abilities in relation to a chosen research question by integrating, synthesising and further developing the skills previously gained in their MSc.</td>
</tr>
<tr>
<td>Duration</td>
<td>The Project report option module runs over one academic year, from 1 October to 30 September of the following year. Students are expected to submit their project proposal and complete the report in the same academic year. Alternatively, students may opt to complete a project report over the course of two years instead of one, split at any stage, but the submission deadlines below remain the same, with the submission of the Final Project Report due by 30 September in the year the student wishes it to be assessed. Students are not entitled to any additional supervisory support if spreading the project over two years instead of one year (i.e. the supervisory support given over two years</td>
</tr>
</tbody>
</table>
must add up to no more than the equivalent of one year). Supervisory and other staff support cannot continue beyond the second year of Project report option module registration. This means that students have a maximum of two consecutive years to complete the Project report option module.

Guidance is provided on Moodle for Public Health-registered students considering undertaking the Project report option module from June onwards (before registration closes in September). See the PHM Student Zone PH Discussion Forum on “PHM305 Project Module (Prospective Students)”.

Module Aim and Intended Learning Outcomes

**Overall aim of the module**

The overall module aim is to:

- Give students the opportunity to work on a real public health issue, and to integrate and deepen their understanding of public health concepts and skills learned during the MSc programme.
Module Intended Learning Outcomes

Upon successful completion of the module a student will be able to:

1. Demonstrate independent research skills including the ability to think critically; conduct a high-quality literature review; develop research questions, hypotheses and research plan; navigate fundamental aspects of research (e.g., intellectual property, data protection and ethical issues);

2. Apply public health research skills, including methodological, theoretical and analytical approaches, to a real-world problem, based on knowledge gained throughout the MSc;

3. Demonstrate familiarity with the conventional research-reporting style, including project layout and referencing and writing a scientific report according to prescribed standards (i.e. introduction, synthesis of background literature, methodology, results, discussion, recommendations and conclusion);

4. Reflect on social or ethical issues related to the research, where appropriate;

5. Demonstrate the ability to present, interpret and discuss research findings in relation to other studies and make recommendations in a clear and systematic format.

Indicative Syllabus

<table>
<thead>
<tr>
<th>Session Content</th>
</tr>
</thead>
<tbody>
<tr>
<td>Student research projects must be one of the following types:</td>
</tr>
<tr>
<td><strong>a) Literature Review using a systematic approach</strong></td>
</tr>
<tr>
<td>While all projects involve conducting a certain level of literature review, focussing exclusively on existing literature and reviewing this using a systematic approach helps students to develop the skills needed to systematically search, obtain, analyse, synthesise and draw conclusions on available evidence for public health. To undertake a literature review, you must have good access to library and public health journal resources.</td>
</tr>
<tr>
<td><strong>b) Quantitative research</strong></td>
</tr>
<tr>
<td>For analyses of existing quantitative data, students must have access to the proposed data and the capacity, experience and resources to undertake this type of analysis, e.g. good data and ability to use appropriate software. Principle sources of data are likely to be population or patient data, or secondary financial or activity data from health services authorities or providers. It is recommended that students use Stata for quantitative analysis.</td>
</tr>
<tr>
<td>Although students are generally dissuaded from conducting primary quantitative research, such as surveys, for their projects, they may consider this type of project, but <strong>must</strong> contact the Project Module Organisers before preparing their proposal. This is to ensure that their...</td>
</tr>
</tbody>
</table>
proposed research is feasible in the timeframe for the module and to confirm that they have the necessary skills and resources to conduct the research.

c) Qualitative research
For qualitative research, students should have a good understanding of social science methods, safe access to potential participants, an understanding of the ethical issues, and an ability to draft a proposal outlining methods used for qualitative research and analysis. Students can also undertake a secondary analysis of a qualitative dataset.

d) A combination of above methods
Students may elect to use a combination of the above methods, but should not underestimate the amount of research and analysis this will take.

Teaching and Learning Strategy
Learning is self-directed against a set of learning objectives, using the Project Student Guidelines. Electronic documents are available via the student Moodle site. Supervisors provide feedback on the Proposal, the CARE form, the draft Methods Section, and one Draft Report, and also respond to specific academic queries. Skype sessions with supervisors are expected at Proposal, Methods Section, data collection/analysis and Draft Report stages.

Student support is available from a project supervisor and the Project Module Organisers via email, Skype/Collaborate and through the Moodle discussion forums. A group of past students who successfully completed PHM305 are taking on the role of 'Alumni Mentor' in responding to discussion forum posts and joining Collaborate sessions. They share their own experiences at each stage of project, which complements advice from PMOs and is highly valued by students. This extra support is also available before registration via the PHM Student Zone PH Discussion Forum on “PHM305 Project Module (Prospective Students)”.

Students are encouraged to participate in the Moodle discussion forums, Collaborate sessions and Skype calls, make use of the online resources/materials, and interact with others through the Intermediate Information Skills training from the Library, since
Teaching and Learning Strategy

Engagement in these activities is likely to enhance their project experience and potentially their final grade. The role of the project supervisor is to guide students in carrying out their project. However, ultimate responsibility for the project report rests with the student, and not the supervisor.

Assessment

Assessment Strategy

Students will be assessed on a written report of up to 10,000 words. The Final Project Report is submitted through the online Assignment Management System (AMS), in electronic form.

The Final Project Report should be submitted for marking no later than 30 September in the year the student wishes it to be assessed.

Students who do not submit a project report by the project deadline of their second consecutive year and who are not granted extenuating circumstances, will be awarded a 0 (non-submission) grade. They will be considered to have failed the project at the first attempt and allowed one further attempt at the project.

Resitting assessment

Resits will accord with the LSHTM’s Resits Policy.

For students who are required to re-sit, there are three types of resit which the Board of Examiners can require students to undertake:

(i) ‘Revise and re-submit’: In such cases, the re-sit student will need to make corrections and submit a revised project by an agreed deadline.

(ii) ‘Further data collection’: In such cases the student will be requested to collect or generate new data and revise/update the project, while keeping the initial project topic. Submission should be by the following year’s deadline.

(iii) ‘New project’: In such cases, the re-sit student will need to re-register and do a project on an entirely new topic, for submission by the following year’s deadline.
Resources

The following materials are provided to students after registration and fee payment for this module in September/October:

- DL Public Health Project Student Guidelines;
- Project Module Introduction and Welcome;
- Resources on literature searching and critical appraisal;
- For those doing quantitative analysis: resources on the management of data, and using Stata and EpiDATA;
- For those doing qualitative research: resources on conducting focus groups and interviews;
- Resources on referencing and how to avoid plagiarism;
- Resources (including PowerPoint slides, Panopto video recordings and recorded Collaborate sessions) on completing key stages in project process: Proposal, Combined Academic, Risk assessment and Ethics approval (CARE) form, Methods Section, and Draft Report;
- Good examples of written work completed by past DL Public Health Project Students at each key stage, including Final Reports submitted for assessment;
- In addition to the above, students can participate in module-specific discussion forums on Moodle and live Collaborate sessions, as well as being able to access the LSHTM online library resources;
- A skype call can be arranged with Project Module Organisers after registration to discuss project ideas and to address any queries about the module;
- On completion of library sub-modules to help students conduct an effective, systematic literature search, library staff are available for a one-to-one Skype call if needed.

The books listed will be made available in e-format or hard copy. All other materials may be accessed via the LSHTM VLE – Moodle.
The module-specific site on Moodle provides students with access to the majority of the module learning materials, including a study guide and online reading list (containing both essential and recommended readings), and additional resources including supplementary exercises and optional lecture recordings. In some cases, module materials include a textbook that is made available to students in either hard copy or e-format. All materials posted up on Moodle areas, including computer-based sessions, have been made accessible where possible. The LSHTM Moodle has been made accessible to the widest possible audience, using a VLE that allows for up to 300% zoom, permits navigation via keyboard and use of speech recognition software, and that allows listening through a screen reader. Please contact the University of London through the “Ask a question” resource on the Student Portal if you require any documents in an alternative format.
