

MODULE SPECIFICATION

Academic Year (student cohort covered by specification)	2020-21
Module Code	2407
Module Title	Epidemiology of Non-Communicable Diseases
Module Organiser(s)	Professor Neil Pearce, Dr Karin van Veldhoven, Dr Pauline Scheelbeek, Dr Helena Carreira, Dr Abena Amoah
Faculty	Epidemiology & Population Health
FHEQ Level	Level 7
Credit Value	CATS: 15 ECTS: 7.5
HECoS Code	101335
Term of Delivery	Term 2
Mode of Delivery	For 2020-21 this module is delivered online. Teaching will comprise a combination of live and interactive activities (synchronous learning) as well as recorded or self-directed study (asynchronous learning).
Mode of Study	Full-time
Language of Study	English
Pre-Requisites	Students will be expected to have a good knowledge of epidemiological methods including familiarity with the different study designs, their analysis and interpretation. They should normally have attended the Extended Epidemiology (2007) module in Term 1, however students that attend the module Basic Epidemiology (2001) module will also be considered.
Accreditation by Professional Statutory and Regulatory Body	N.A.
Module Cap (Maximum number of students)	60 (numbers may be capped due to limitations in facilities or staffing)
Target Audience	This module is intended for those with an interest in non-communicable diseases including those concerned with public health in low and middle-income countries.
Module Description	In Epidemiology of Non-Communicable Disease (ENCD) participants will be introduced to and interact with evidence on the status quo, trends, research and policy priorities of major and neglected non-communicable disease. Through lectures and seminars/practical sessions, the module covers "Major Themes in

	Non-Communicable Disease Epidemiology" (week 1), The "Big Four" (CVDs, cancer, diabetes, respiratory illnesses – week 2), Neglected NCDs and Environment (week 3), and advanced topics in NCD epidemiology (week 4). Students write a brief assessment (1500 words) on a topic of choice discussed in week 1-2. Furthermore, they will sit a short essay question exam covering topics from week 3 and 4.
Duration	5 weeks at 2.5 days per week
Timetabling slot	Slot D1
Last Revised (e.g. year changes approved)	10/2020

Programme(s)	Status
This module is linked to the following programme(s)	
MSc Epidemiology	Recommended
MSc Health Policy, Planning & Finance	Recommended
MSc Public Health	Recommended
MSc Public Health (Environment & Health)	Recommended
MSc Public Health (Health Promotion)	Recommended
MSc Public Health for Development	Recommended

Module Aim and Intended Learning Outcomes

Overall aim of the module
<p>The overall module aim is to:</p> <ul style="list-style-type: none"> • Provide an overview and stimulate critical thinking on the importance of and trends in non-communicable diseases globally, including low and middle income countries • generate an appreciation of the drivers of the burden of non-communicable diseases and how this knowledge can be used for NCD prevention and control • identify methodological and conceptual issues for studying, measuring and analysing non-communicable diseases and their prevention strategies

Module Intended Learning Outcomes
<p>Upon successful completion of the module a student will be able to:</p> <ol style="list-style-type: none"> 1. Appreciate the growing global importance of non-communicable diseases across low middle and high income countries 2. Identify the major determinants of non-communicable diseases and the key challenges faced by epidemiology and public health in studying and controlling these conditions

Indicative Syllabus

Session Content

The module is expected to cover the following topics:

- Week 1: Priorities and emerging themes in Non-Communicable Disease Epidemiology – A global perspective.
- Week 2: Describe the trends, distribution, and key determinants of the disease burden and mortality associated with the “big four” (cancer, CVDs, respiratory illness and diabetes) and the challenges for their prevention and control
- Week 3: Describe the trends, distribution, and key determinants of the disease burden and mortality associated with neglected and environmental NCDs and the challenges for their prevention and control
- Week 4: Challenges and opportunities for measuring and analysing burden and risk factors of NCDs
- Written Assessment: Communicating evidence to policy-makers, scientists and/or the general public
- Exam: Apply transferable skills to new NCD questions and challenges

Teaching and Learning

Notional Learning Hours

Type of Learning Time	Number of Hours	Expressed as Percentage (%)
Contact time	30	20%
Directed self-study	45	30%
Self-directed learning	35	23%
Assessment, review and revision	40	27%
Total	150	100%

Student contact time refers to the tutor-mediated time allocated to teaching, provision of guidance and feedback to students. This time includes activities that take place in face-to-face contexts such as lectures and seminars as well as where tutors are available for one-to-one discussions and interaction by email. Student contact time also includes tutor-mediated activities that take place in online environments, which may be synchronous (using real-time digital tools such as Zoom or Blackboard Collaborate Ultra) or asynchronous (using digital tools such as tutor-moderated discussion forums or blogs often delivered through the School’s virtual learning environment, Moodle).

The division of notional learning hours listed above is indicative and is designed to inform students as to the relative split between interactive (online or on-campus) and self-directed study.

Teaching and Learning Strategy

This module consists of a mixture of interactive lectures, seminars and (self) directed study sessions. The module uses a variety of teaching and learning methods to facilitate the learning of different types of students, including:

- Research-informed teaching (using current literature)
- Promoting active learning through:
 - * Peer-to-peer discussions and feedback
 - * facilitator-led discussions and feedback
- Flipped classroom approaches

Formative tasks include:

- seminar presentations
- leading classroom discussions on an NCD topic.
- Peer-review on assessment drafts

Assessment

Assessment Strategy

The module features a combination of formative and summative assessments to stimulate critical thinking, application knowledge on NCDs in various settings, and communicating evidence to various audiences.

Formative Assessments:

- Every week 4-5 students lead a discussion and critical appraisal of a paper on an NCD topic, and present the evidence to their seminar groups
- After week 2 students are paired up with a fellow student and provide peer-feedback on assessment drafts.
- Students will complete a practical session on the use of open source data for epidemiology and control of NCDs

Summative Assessments:

- After the first week of lectures, students will select a topic of choice for their written assessments. They will be introduced to technical briefs, scientific posters and public engagement proposals and decide on a format to match their topic. They will work throughout the module on communicating their evidence to policy makers, academic audiences or the general public, thereby demonstrating their understanding of the wider NCD evidence base, its interpretation and the relevance for various audiences. Deadline for the assessment hand-in is in week 5
- In week 5 students sit a timed open book exam covering all lectures, seminars and practical sessions in week 3 and 4.

Summative Assessment

Assessment Type	Assessment Length (i.e. Word Count, Length of presentation in minutes)	Weighting (%)	Intended Module Learning Outcomes Tested
Coursework	1500 words	50	ILO 1 & 2
Timed Test (in-module test e.g. MCQ)	Short essay questions (choice of 2 out of 4) – 2 hours	50	ILO 1 & 2

Resitting assessment

Resits will accord with the LSHTM's [Resits Policy](#)

Resit/deferred/new attempts – The task will be a timed exam and/or a resubmission of a written assessment. All resits will take place in September. If students failed one component of the summative assessment, but passed the other component they will be given the opportunity to only resit the component that they failed.

Other resources

Module information can be found on the Virtual Learning Environment (Moodle) containing information about each session and key references for the module. Course information, timetable, lecture notes, key literature for each session, seminar information and assessment examples from previous years. In addition, access to the distance learning Epidemiology of Non-Communicable Diseases (NCD) module is provided as optional additional material.

Teaching for Disabilities and Learning Differences

The module-specific site on Moodle gives students access to lecture notes and copies of the slides used during the lecture. Where appropriate, lectures are recorded and made available on Moodle. All materials posted on Moodle, including computer-based sessions, have been made accessible where possible.

LSHTM Moodle is accessible to the widest possible audience, regardless of specific needs or disabilities. More detail can be found in the [Moodle Accessibility Statement](#) which can also be found within the footer of the Moodle pages. All students have access to “SensusAccess” software which allows conversion of files into alternative formats.

Student Support Services can arrange learning or assessment adjustments for students where needed. Details and how to request support can be found on the [LSHTM Disability Support pages](#).
