

MODULE SPECIFICATION

Academic Year (student				
cohort covered by	2021-22			
specification)				
Module Code	2475			
Module Title	Robust Statistical Methods			
Module Organiser(s)	Dr Clémence Leyrat			
Faculty	Epidemiology & Population Health			
FHEQ Level	Level 7			
Credit Value	CATS: 5			
Credit Value	ECTS: 2.5			
HECoS Code	101031			
Term of Delivery	Term 1			
Mode of Delivery	For 2021-22 this module will be delivered online until reading			
	week. A combination of face-to-face and online learning will be			
	used thereafter.			
	There will be a combination of live and interactive activities			
	There will be a combination of live and interactive activities			
	(synchronous learning) as well as recorded or self-directed study			
	(asynchronous learning).			
Mode of Study	Full-time			
Language of Study	English			
Pre-Requisites	Knowledge of basic statistics and statistical programming using			
	R (as taught on Foundations of Medical Statistics) will be			
	assumed. Students should be familiar with the notions of a p-			
	value, confidence interval, t-test, Pearson's correlation coefficient			
	and – by the final lecture of the module – linear regression.			
Accreditation by	None			
Professional Statutory and				
Regulatory Body				
Module Cap (indicative	25-35 (numbers may be capped due to limitations in staffing)			
number of students)				
Target Audience	This module is compulsory for the MSc Medical Statistics.			
Module Description	This module introduces a set of statistical methods robust to the			
	violation of some hypotheses required for standard statistical			
	techniques (such as t-test, linear regression, etc.). The module			
	comprises 5 sessions, consisting of a recorded lecture, a live			
	Q&A session (online) - and a computer practical using R (on			
	campus or online).			
Duration	5 weeks at 0.5 days per week			

Timetabling slot	Second half of Term 1
Last Revised (e.g. year	August 2021
changes approved)	

Programme(s)	Status
This module is linked to the following programme(s)	
MSc Medical Statistics	Compulsory

Module Aim and Intended Learning Outcomes

Overall aim of the module

The overall module aim is to:

• introduce the basic principles of robust statistical methods.

Module Intended Learning Outcomes

Upon successful completion of the module a student will be able to:

- 1. Understand, describe and decide when it is, and when it is not, appropriate to use robust methods
- 2. Understand and describe the strengths and limitations of a range of robust methods
- 3. Apply these techniques appropriately in a number of simple settings

Indicative Syllabus

Session Content

The module is expected to cover the following topics:

- A revision of standard statistical procedures and the assumptions underlying them
- Non-parametric and rank-based procedures (including the sign test, the Wilcoxon signedrank test, the Wilcoxon rank-sum test/Mann-Whitney U test, and the Spearman rank correlation coefficient)
- Randomisation and permutation procedures
- The non-parametric bootstrap
- Sandwich-style estimators of standard errors

Teaching and Learning

Notional Learning Hours

Type of Learning Time	Number of Hours	Expressed as Percentage	
		(%)	
Contact time	13	26	
Directed self-study	10	20	
Self-directed learning	7	14	
Assessment, review and revision	20	40	
Total	50	100	

Student contact time refers to the tutor-mediated time allocated to teaching, provision of guidance and feedback to students. This time includes activities that take place in face-to-face contexts such as practical classes and Q&A session, as well as where tutors are available for one-to-one discussions and interaction by email. Student contact time also includes tutor-mediated activities that take place in online environments, which may be synchronous (using real-time digital tools such as Zoom) or asynchronous (using through the School's virtual learning environment, Moodle).

The division of notional learning hours listed above is indicative and is designed to inform students as to the relative split between interactive and self-directed study.

Teaching and Learning Strategy

Learning will be based on a lecture followed by a relevant practical with all practicals involving the use of computers. An assessment will be given as part of the practical work. A little over half the contact time will be spent in the form of practicals.

Assessment

Assessment Strategy

The assessment for this module has been designed to measure student learning against the module intended learning outcomes (ILOs) as listed above. The grade for summative assessment(s) only will go towards the overall award GPA.

The assessment for this module in term 1 will be online..

Summative Assessment

Assessment Type	Assessment Length (i.e. Word Count, Length of presentation in minutes)	Weighting (%)	Intended Module Learning Outcomes Tested
Coursework	One-sided A4 report	See 8a.6.22 in <u>Chapter</u> <u>8a</u>	1, 2 & 3
Exam (Papers 1 & 2)	1 question in Paper 1	See 8a.6.22 in <u>Chapter</u> <u>8a</u>	1, 2 & 3

Resitting assessment

Resits will accord with the LSHTM's <u>Resits Policy</u>

Resit/deferred/new attempts – Students will take a new Paper 1 written examination. The assignment will be different (but similar in nature) to the original task set. Paper 1 written examinations will take place early/mid-June in the following academic year. Assignments will be assessed during mid/late September of the current academic year.

Teaching for Disabilities and Learning Differences

The module-specific site on Moodle provides students with access to lecture notes and copies of the slides used during the lecture prior to the lecture (in pdf format). All lectures are recorded and made available on Moodle as quickly as possible. All materials posted up on Moodle areas, including computer-based sessions, have been made accessible where possible.

The LSHTM Moodle has been made accessible to the widest possible audience, using a VLE that allows for up to 300% zoom, permits navigation via keyboard and use of speech recognition software, and that allows listening through a screen reader. All students have access to "SensusAccess" software which allows conversion of files into alternative formats.

For students who require learning or assessment adjustments and support this can be arranged through the Student Support Services – details and how to request support can be found on the <u>LSHTM Disability Support pages</u>.
