

# **MODULE SPECIFICATION**

Academic Year (student			
cohort covered by	2023-24		
specification)			
Module Code	3404		
Module Title	Non-Communicable Eye Disease		
Module Organiser(s)	GV Murthy; Abeer Mohamed Ahmed		
Faculty	Infectious & Tropical Diseases		
FHEQ Level	Level 7		
Credit Value	<b>CATS:</b> 15		
	ECTS: 7.5		
HECoS Code	100261:100036:101317 (1:1:1)		
Term of Delivery	Term 2		
Mode of Delivery	This module will be delivered predominantly via face to face teaching, complemented by online resources and learning activities, including field visits for observing how Diabetic Retinopathy screening services are implemented in UK.		
	There will be a combination of live and interactive activities (synchronous learning) as well as recorded or self-directed study (asynchronous learning).		
Mode of Study	Full-time		
Language of Study	English		
Pre-Requisites	Previous experience in eye health care is advantageous		
Accreditation by	None		
Professional Statutory			
and Regulatory Body Module Cap (Indicative	20 (numbers may be canned due to limitations in facilities or		
number of students)	20 (numbers may be capped due to limitations in facilities or staffing)		
Target Audience	This module is compulsory for MSc Public Health for Eye Care and open to students from other MSc programmes with the appropriate background. It is suitable for Ophthalmologists or those aspiring to pursue ophthalmology in their medical career; Optometrists; Researchers; Eye Care Programme Managers and other senior health workers involved in planning or delivery of eye care services.		
Module Description	This module teaches students how to evaluate the evidence for and propose alternative control strategies for non-		

	communicable adult causes of blindness/low vision, with		
	emphasis on the student's own work situation.		
Duration	5 weeks at 2.5 days per week		
Timetabling slot	Slot C2		
Last Revised (e.g. year	August 2023		
changes approved)			

<b>Programme(s)</b> This module is linked to the following programme(s)	Status
MSc Public Health for Eye Care	Compulsory

# Module Aim and Intended Learning Outcomes

#### Overall aim of the module

The overall module aim is to:

• Evaluate and propose alternative control strategies for non-communicable adult causes of blindness/low vision, with emphasis on the student's own work situation.

#### **Module Intended Learning Outcomes**

Upon successful completion of the module a student will be able to:

- 1. Assess the evidence on the risk factors and management of cataract;
- 2. Interpret and use indicators used evaluating cataract services (output, outcome and outlay);
- 3. Propose control strategies for the elimination of cataract blindness appropriate to the student's place of work;
- 4. Assess the evidence on the risk factors and management of glaucoma, diabetic retinopathy, age-related macular degeneration and refractive errors;
- 5. Discuss the role of screening programmes in preventing blindness;
- 6. Examine the management and prevention challenges of blindness from ocular injuries;
- 7. Assess the evidence on the magnitude, risk factors and management of low vision and propose strategies for control appropriate to the student's place of work.

# **Indicative Syllabus**

#### **Session Content**

The module is expected to cover the following topics:

- Cataract pathophysiology, aetiology and epidemiology. Management options for cataract blindness and control strategies in specific settings.
- Glaucoma pathophysiology, aetiology and epidemiology. Management options for glaucoma and control strategies in specific settings.
- Diabetic retinopathy pathophysiology, aetiology and epidemiology. Management options for DR and control strategies in specific settings.
- Refractive errors pathophysiology, aetiology and epidemiology. Management options for RE control strategies in specific settings.
- Age-related Macular Degeneration (AMD) pathophysiology, aetiology and epidemiology. Management options for AMD and control strategies in specific settings.
- Principles of screening programmes and their application in non-communicable eye diseases.
- Low vision: epidemiology, management and control strategies. Low vision services.

# **Teaching and Learning**

#### **Notional Learning Hours**

Type of Learning Time	Number of Hours	Expressed as Percentage	
		(%)	
Contact time	42.5	28.3	
Directed self-study	22.5	15	
Self-directed learning	35	23	
Assessment, review and revision	50	33.3	
Total	150	100	

Student contact time refers to the tutor-mediated time allocated to teaching, provision of guidance and feedback to students. This time includes activities that take place in face-to-face contexts such as lectures, seminars, demonstrations, tutorials, supervised laboratory workshops, practical classes, project supervision as well as where tutors are available for one-to-one discussions and interaction by email.

The division of notional learning hours listed above is indicative and is designed to inform students as to the relative split between interactive (online or on-campus) and self-directed study.

#### **Teaching and Learning Strategy**

The teaching and learning strategy is a combination of face to face and online activities, with small group teaching and some self-directed Moodle based learning. There are also computer practicals that will allow the students to apply the module knowledge to their own populations and a field trip to see diabetic retinopathy screening in action.

## Assessment

#### Assessment Strategy

The assessment for this module has been designed to measure student learning against the module intended learning outcomes (ILOs) as listed above. Formative assessment methods may be used to measure students' progress. The grade for summative assessment(s) only will go towards the overall award GPA.

The assessment for this module may be held face to face or online.

The assessment will consist of a written timed paper: Short answer questions from the module content.

#### **Summative Assessment**

Assessment Type	Assessment Length (i.e. Word Count, Length of presentation in minutes)	Weighting (%)	Intended Module Learning Outcomes Tested
Timed Paper	180 minutes	100	1, 2, 3, 4, 5, 6, 7

#### **Resitting assessment**

Resits will accord with the LSHTM's Resits Policy

The resit assessment will be the same assessment type as the first attempt <u>but</u> a new set of short answer questions will be prepared for the written paper.

# **Teaching for Disabilities and Learning Differences**

The module-specific site on Moodle gives students access to lecture notes and copies of the slides used during the lecture. Where appropriate, lectures are recorded and made available on Moodle. All materials posted on Moodle, including computer-based sessions, have been made accessible where possible.

LSHTM Moodle is accessible to the widest possible audience, regardless of specific needs or disabilities. More detail can be found in the <u>Moodle Accessibility Statement</u> which can also be found within the footer of the Moodle pages. All students have access to "SensusAccess" software which allows conversion of files into alternative formats.

Student Support Services can arrange learning or assessment adjustments for students where needed. Details and how to request support can be found on the <u>LSHTM Disability</u> <u>Support pages</u>.
