## MODULE SPECIFICATION

<b>Academic Year (student cohort covered by specification)</b>	2024-25			
<b>Module Code</b>	CTM208			
<b>Module Title</b>	Further Statistical Methods in Clinical Trials			
<b>Module Organiser(s)</b>	Charles Opondo, Joanna Dobson, Felicity Clemens			
<b>Contact Email</b>	<a href="mailto:CTsupport@lshtm.ac.uk">CTsupport@lshtm.ac.uk</a>			
<b>Faculty</b>	<a href="#">Epidemiology and Population Health</a> London School of Hygiene & Tropical Medicine			
<b>FHEQ Level</b>	Level 7			
<b>Credit Value</b>	<b>CATS</b>	15	<b>ECTS</b>	7.5
<b>HECoS Code</b>	10096 : 10047 : 101031			
<b>Mode of Delivery</b>	Distance Learning			
<b>Mode of Study</b>	Self-study, through the online Virtual Learning Environment			
<b>Language of Study</b>	English			
<b>Pre-Requisites</b>	<p>All of the Clinical Trial (CT) elective modules assume familiarity with the material and terminology introduced in the core CT modules, and for this module CTM102 <i>Basic Statistics for Clinical Trials</i> is particularly relevant. Students who do not have a background in clinical trials may need to spend some time familiarising themselves with terminology before they can successfully complete any of the CT elective modules.</p> <p>Students taking this module are <b>not</b> permitted to register and study both this module and EPM304, due to overlap of the content.</p> <p>Those wishing to study this module must have regular access to the internet to access the module study materials, access to Stata statistical software, participate in module-specific discussions and tutorials on Moodle, benefit from online library facilities and submit assignments. Prior reading is not required before registering on this module. Students will be provided with core texts at the beginning of the module.</p>			
<b>Accreditation by Professional Statutory and Regulatory Body</b>	Not currently accredited by any other body			

**UNIVERSITY  
OF LONDON**

LONDON  
SCHOOL of  
HYGIENE  
& TROPICAL  
MEDICINE

<b>Module Cap (Maximum number of students)</b>	There is no cap on the number of students who can register for this distance learning module. The number of students actively studying this module varies, but typically approximately 35 students register for the module per year.
<b>Target Audience</b>	Optional module for all the students on DL MSc Clinical Trials, PG Diploma Clinical Trials, MSc Epidemiology. Also open to any other student who meets pre-requisites for the module and who wishes to learn about <i>Further Statistical Methods for Clinical Trials</i> .
<b>Module Description</b>	This module builds on CTM102 Basic Statistics for Clinical Trials. CTM208 covers more statistical methods used in clinical trials than those covered in CTM102. It extends the application of conventional regression methods for the analysis of binary, continuous, and time-to-event data in individually randomised clinical trials, and introduces methods to deal with common statistical issues in clinical trials, including repeated measurements, missing data, subgroup analyses and sensitivity analyses. Data analyses are carried out using Stata, and students learn to write Stata commands, perform analyses in Stata and interpret the output.
<b>Duration</b>	Distance learning module studies begin on Tuesday 1 <sup>st</sup> October 2024. Students may start their studies at any time once they gain access to Moodle and therefore the study materials, and work through the materials until the start of the June Time Limited Assessments (formative assignments have earlier submission deadlines which must be observed).
<b>Last Revised (e.g. year changes approved)</b>	March 2024

<b>Programme(s)</b>	<b>Status</b>
This module is linked to the following programme(s)	
PGDip/MSc Clinical Trials (University of London Worldwide)	Elective

## Module Aim and Intended Learning Outcomes

### Overall aim of the module

The overall module aim is to:

- develop students' statistical skills and knowledge to enable them to confidently analyse and interpret the results of individually randomised clinical trials.

### Module Intended Learning Outcomes

Upon successful completion of the module a student will be able to:

1. Select suitable methods for the analysis of clinical trials
2. Demonstrate understanding of the concept of likelihood
3. Perform appropriate analysis of trial data using statistical software
4. Report and interpret the results of analyses of clinical trials.

## Indicative Syllabus

### Session Content

This module consists of 10 CAL (Computer Assisted Learning) sessions. The titles of the sessions are as follows:

- Introduction to Module
- Principles of Regression
- Linear Regression
- Likelihood
- Logistic Regression
- Poisson Regression
- Survival Analysis
- Multiplicity of Data
- Further Topics in Statistics
- Summary

## Teaching and Learning

### Notional Learning Hours

Type of Learning Time	Number of Hours	Expressed as Percentage (%)
Directed self-study	60	40
Self-directed learning	30	20
Assessment, review and revision	60	40
<b>Total</b>	<b>150</b>	<b>100</b>

### Teaching and Learning Strategy

Learning is self-directed against a detailed set of learning outcomes using the materials provided.

To support their self-directed learning, students are strongly encouraged to:

- post questions for tutors or fellow students and participate in the module-specific discussion board forums available on Moodle.
- submit a Tutor Marked Formative Assignment (TMFA), for which personalised written feedback is available. Students are provided with written feedback on submitted TMFAs.
- work through the Self Assessed Formative Assignment (SAFA), for which self-assessment tools are provided. This is not compulsory and does not contribute to the overall module grade.
- work through the Self Assessed Time Limited Assessment (SATLA), for which self-assessment tools are provided. This is not compulsory and does not contribute to the overall module grade.
- learn from written feedback from tutors on submitted AAs.
- join real-time tutorials via Collaborate, available on Moodle, to obtain additional tutor support: at least two tutorials are available, one focusing on Assessed Assignments, and one for Time Limited Assessment (TLA) preparation.
- make use of LSHTM online library resources.  
make use of Examiners' Reports which include previous assessments questions and specimen answers.

## Assessment

### Assessment Strategy

The assessment strategy for CTM208 is designed to support progressive student learning through optional formative assessments (FA), which can be self-assessed (SAFA) or tutor-marked with feedback (TMFA), a summative written assessed assignment (AA) and a formal time limited assessment (TLA).

The FAs are used to build skills, and encourage students to engage with the study materials. For both the TMFA and AA, students are provided with clinical trial data to analyse and interpret, which additionally builds data analysis and statistical software skills. The FAs and AA encourage M-level thinking through questions which challenge students to consult study materials and to reflect and problem-solve. They support attainment of ILOs by collectively testing across the range of learning outcomes. The AA is designed to test whether students are going beyond reiteration of the materials, and using M-level skills of criticality, and wider reflection. The word limit gives sufficient text allowance to demonstrate these skills within a succinct and focused writing style. The TLA questions are also written to test core

**Assessment Strategy**

learning and M-level skills and should be answered with the same criticality as should be demonstrated in the AAs. For all CTM208 assessments the application of key learning to scenario-based questions encourages students to develop the skill of using core learning to respond to real-life problems encountered in the analysis and interpretation of clinical trial data. Past AA and TLA papers, all with specimen answers, are available for practice and self-assessment.

**Summative assessment**

<b>Assessment Type</b>	<b>Assessment Length (i.e. Word Count, Length of presentation in minutes)</b>	<b>Weighting (%)</b>	<b>Intended Module Learning Outcomes Tested</b>
Assessed assignment	The Assessed Assignment has a maximum word length of 3000 words	60	1, 2, 3, 4
Time Limited Assessment	The TLA has a maximum word length of 3000 words	40	1, 2, 4

Time Limited Assessments (TLAs) for DL modules are held once a year, usually in June (including resits). The assessments are held in accordance with University of London's annual guidance. Please note that for those resitting module assessments, a fee will be payable. Further details will be communicated as soon as the final decisions are known.

**Resitting assessment**

Resits will accord with the LSHTM's [Resits Policy](#)

## Resources

### **Essential resources**

The following materials are provided to students after registration for this module once a year in October:

- Computer Assisted Learning (CAL) materials provided electronically through the online learning site Moodle, for self-directed study
- Stata datasets.
- E-books as below
- Online reading

### *E-books*

- Kirkwood B, Sterne J. *Essential Medical Statistics*. Malden, Mass: Blackwell Science; 2003

### *Examples of online reading*

- Pocock SJ, Assmann SE, Enos LE, Kasten LE. Subgroup analysis, covariate adjustment and baseline comparisons in clinical trial reporting: current practice and problems. *Stat Med*. 2002; 21: 2917-30.
- Clayton D, Hills M. *Statistical Models in Epidemiology*. Oxford: Oxford University Press; 1993.
- Collett D. *Modelling Survival Data in Medical Research*. 2nd Edition. Chapman and Hall; 2003.
- Moher D, Hopewell S, Schulz KF, Montori V, Gøtzsche PC, Devereaux PJ, Elbourne D, Egger M, Altman DG. CONSORT 2010 explanation and elaboration: updated guidelines for reporting parallel group randomised trials. *BMJ*. 2010; 340: c869

In addition to the materials above, students are given access to the LSHTM Virtual Learning Environment, Moodle (for online discussions forums etc.) and the LSHTM online library resources.

## Teaching for Disabilities and Learning Differences

The module-specific site on Moodle provides students with access to the module learning materials and online reading list (containing both essential and recommended readings), and additional resources including supplementary exercises and optional lecture recordings (where appropriate). All materials posted up on Moodle areas, including computer-based sessions, have been made accessible where possible. The LSHTM Moodle has been made accessible to the widest possible audience, using a VLE that allows for up to 300% zoom, permits navigation via keyboard and use of speech recognition software, and that allows listening through a screen reader.

For students with special needs, reasonable adjustments and support can be arranged – details and how to request support can be found on the University of London website at [Inclusive practice access arrangements](#)
