

## Kamla Pillay

I am a paediatric trainee with an interest in infection biology and anti-microbial resistance. I am leading the FIEBRE systematic review on dengue diagnostics which is an enormous but exciting project - particularly given there are no large scale meta-analyses estimating sensitivity and specificity of diagnostic tests for dengue (11,000 abstracts have been screened).

My MSc project at LSHTM was with the [Mostowy laboratory](#) focused on host-pathogen interactions in *Shigella* infection. Currently, I'm working as a Clinical Research Fellow at the [Centre for Neonatal and Paediatric Infection \(CNPI\)](#) in St George's University, working on the NeoSep trial which aims to evaluate novel antibiotic combinations for neonatal sepsis. Ultimately, I would like to become a clinical academic in paediatric infectious diseases.

Outside of work I love seeing live music and cycling around Europe.
